Date: _____

I can estimate and then accurately measure lengths.

Find an object to measure and write it in the first object box. Then estimate (guess) how long you think it is in centimetres (cm) and record this in the correct box. Next, measure the actual length of the object and record this in the table. Repeat this for more objects until you have completed the table. **Your first 4 objects must be less than 1m long**. A row row has been filled in to show you.

	Object	**Estimate**	**Actual length**
Eg.	Colouring pen	15 cm	14 cm
A			
B			
C			
D			
E			
F			
G			
H			
I			
J			

Put the objects in order from **longest** to **shortest** (use the letters).

Date: _____

I can add and subtract lengths.

Using the actual measurements for your objects on the previous page, solve these word problems. Don't forget to underline or circle the key words in each problem to help you to work out whether you need to add or subtract!

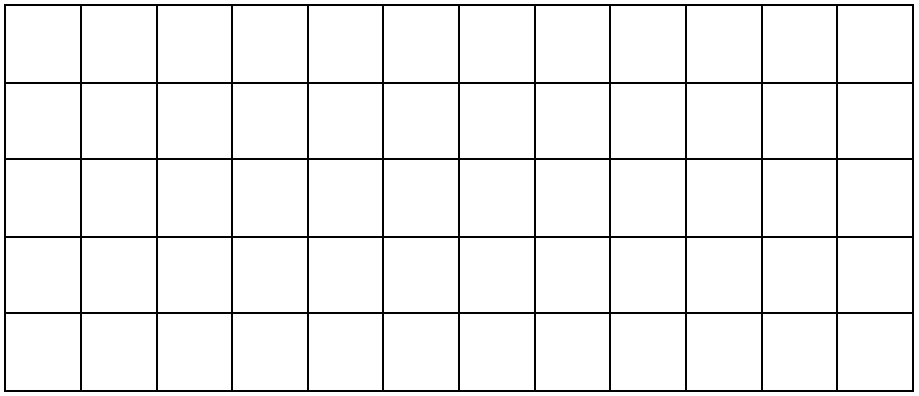
1. What is the total length of Object A and Object C?

2. What is the combined length of Object B and Object D?

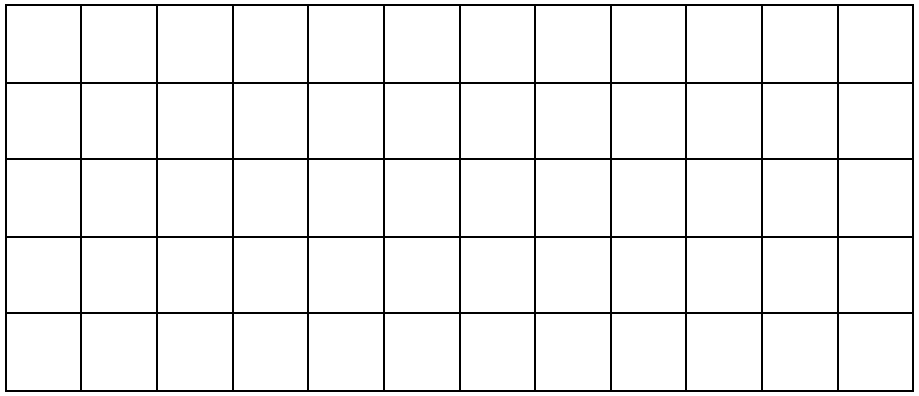
3. What is the sum of the lengths of Object B and Object C?

4. What is the length of Object A plus the length of Object D?

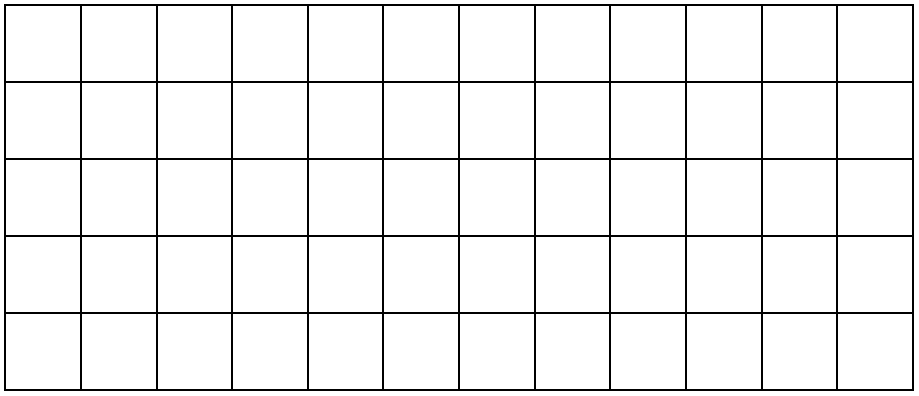
5. What is the difference in length between Object A and Object C?

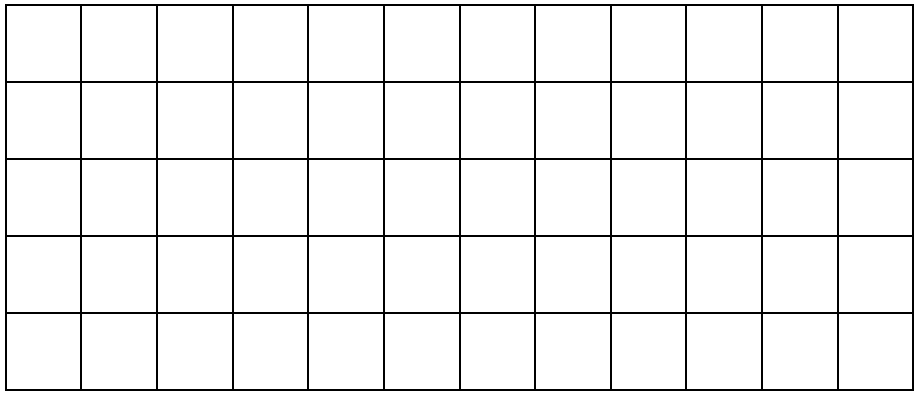


6. What is 99cm take away the length of Object B?



7. What is 168cm minus the length of Object D?





8. What is 10 cm less than the length of Object E?
